

# Jobserver Dashboard and Hangfire Access

Tuesday, 7 June 2022 10:23 AM

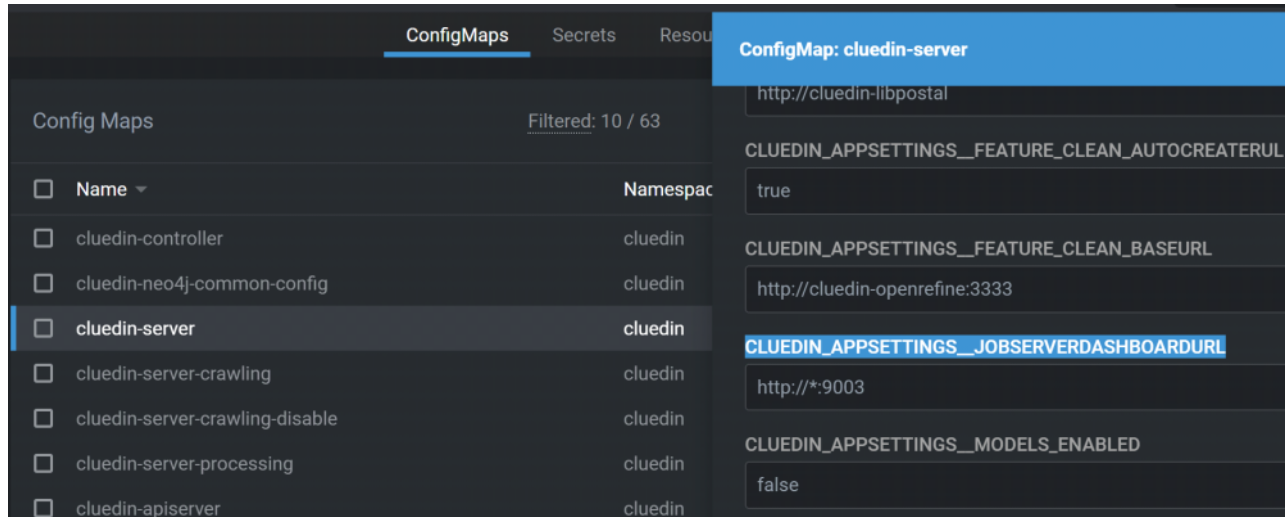

## Purpose

CluedIn uses hangfire (<https://www.hangfire.io/>) as the job scheduler - access to the dashboard is useful for troubleshooting implementations.

## Method

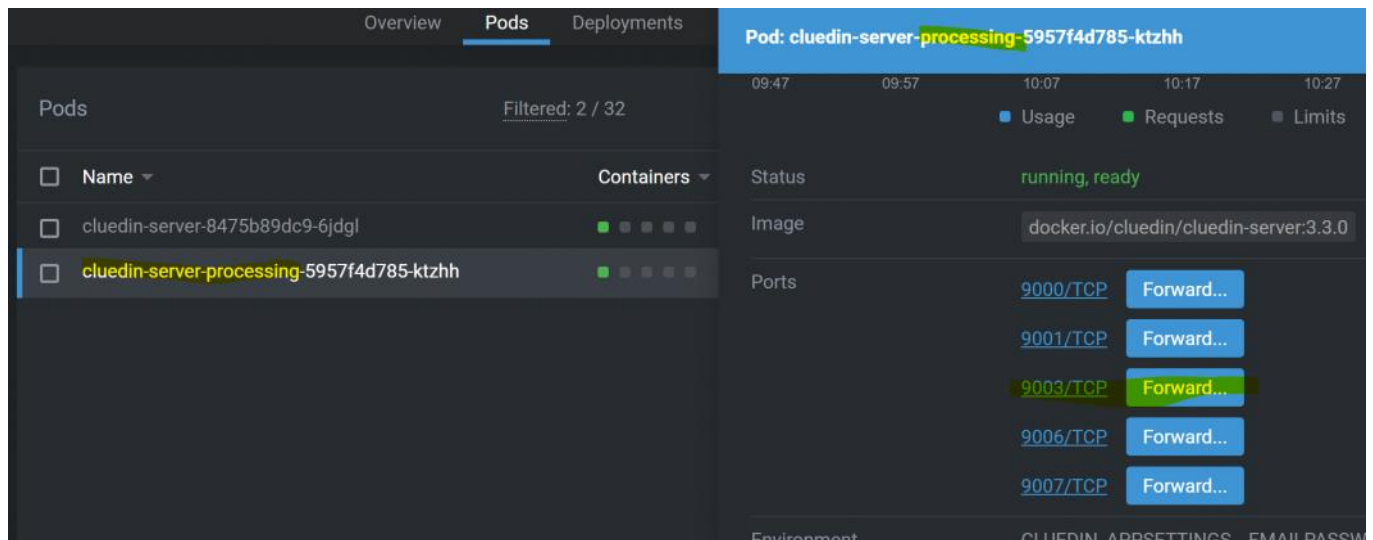

Ensure you have lens (<https://k8slens.dev/>) installed and configured.

Check the configmap for the jobserver dashboard port - should be 9003 as depicted below

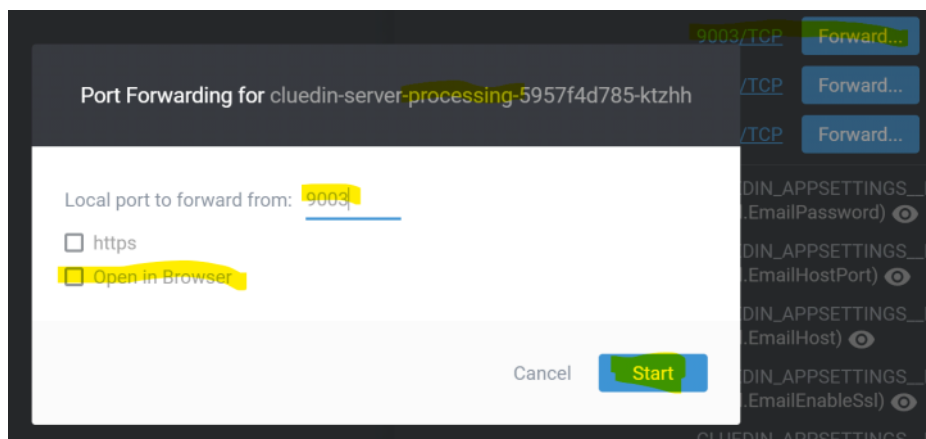

Find the respective port forwarding entry in the pod configuration

**Note:** this is **processing** not server

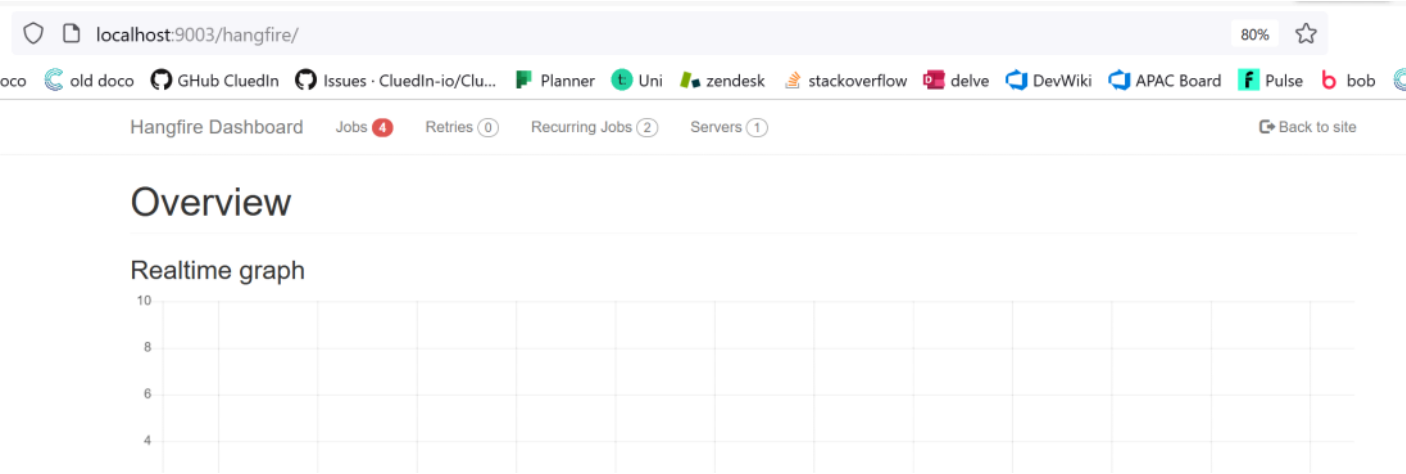

Forward the port and open in the browser  
choose the same port number to bind locally  
untick open in browser

Open hangfire interface

<http://localhost:9003/hangfire/>

Or go directly to the recurring page  
<http://localhost:9003/hangfire/recurring>

## Recurring jobs

Trigger nowDelete

Items per page: 1020501005001,0005,000

<input type="checkbox"/> Id	Cron	Time zone	Job	Next execution	Last execution	Created
<input type="checkbox"/> MetricsGlobal	0 0 * * *	UTC	ProcessGlobalMetricsJob.Run	in a day	an hour ago	4 months ago
<input type="checkbox"/> MetricsArchiveValues	30 0 * * *	UTC	ArchiveMetricsValuesJob.Run	in a day	an hour ago	4 months ago

**Note:** these metrics jobs can be executed manually
